

SECURITY FEATURES

Stock protected

Card stock, reject cards, indent ribbons and used topping foils are locked in the cabinet.

Locked cabinet
Key or password entry.

Concealed output tray

Completed cards are kept from view until you are ready to hand them to the customer.

"Giving out cards at the time an account is opened, coupled with letting the customer select a PIN drives up success." *Bob Barone, President of Diebold, Inc.*

Theft protection

Easily secures to your counter or desktop.

Card Counter

These cannot be reset, which helps with audit control.

SIMPLE TO MANAGE AND MAINTAIN

Single pass

All the features you need in one pass embossing, magnetic stripe encoding, color tipping, with optional smart card personalization and security indent printing.

Intelligent foil topper

Automatically adjusts for each card without any guidance.

Easy loading

The upright card tray is easily accessible and the topping foil cassette simply pops out for restocking.

Display panel

It notifies you when card stock is low, the foil cassette is empty, or when the output tray is full. It provides you with everything you need for smooth operation.

Easy to re-encode

You can easily re-encode or re-PIN cards, even if they are pre-encoded.
